

SE 3290 – Software Project Management
Fall 2026
Class Project A (The Prelude Project)
Project Name: Expedia – Clone

Project Type: Web Application

Project Link: <https://github.com/kumkumdutta/Expedia-clone>

Expedia – Clone is a React + Redux-based open-source web application that replicates the core functionality of Expedia, enabling users to search, filter, and book **hotels, flights, and train tickets**. It includes **cart** functionality, an **admin panel**, and Firebase-based **authentication**. Built with React, Redux, Firebase, HTML, CSS, and JavaScript.

Application Features

User:

- Landing Page
- Login and Signup via Firebase (OTP)
- View details of flights and hotels
- Search for flights, hotels, and holiday packages
- Sorting, filtering, and searching capabilities
- Booking functionality for flights and hotels
- Cart section

Administrator (Admin Panel):

- Manage hotel and booking listings.
- Access booking requests and user details.
- Oversee cart and transaction workflows.

Deployment Steps

Deployment Options (Choose one of them):

- Local Deployment
- Cloud Deployment

Local Deployment:

1. **Clone the Repository** – Obtain a copy of the project from GitHub.
2. **Install Dependencies** – Ensure Node.js and required packages are installed.
3. **Configure Firebase** – Set up a Firebase project, enable authentication and database, then update the project configuration with your Firebase credentials.
4. **Run Locally** – Start the application on your local development server.
5. **Build for Production** – Generate an optimized version of the application for deployment.

Cloud Deployment:

1. **Choose Hosting Platform** – Select a hosting service such as Vercel, GCP, AWS.
2. **Deploy Build Files** – Upload or connect the project to the chosen platform.

3. **Configure Environment Settings** – Add Firebase credentials and other environment variables required for production.
4. **Verify Deployment** – Test authentication, search, booking, and admin panel features in the deployed environment.

Deliverables

1. Source Code Repository (Submit the repository link, and make sure it is Public Repository):

- Fully functional Expedia-Clone web application hosted on your own repository.
- Clear folder structure following best practices.
- README.md with project overview, features, and installation steps.
- Contribution guidelines for future open-source contributors.

2. Demonstration Video:

- A short, recorded walkthrough (5–10 minutes) demonstrating key features: login/signup, searching, filtering, booking, and admin panel.

3. Final Report:

- Project background and objectives.
- Description of architecture and tech stack.
- Deployment details, challenges faced, and solutions.
- Future work and potential improvements.
